

# DUGGAN PLUMBING AND OUR LOOSE NUT RANGE

**H**ydroflow Australia was established in 2013 and distributes many of the world's leading industrial brands; each of these brands have been selected based on product innovation and quality. We work closely with the plumbing industry providing support and technical expertise.

Duggan Plumbing is a true family business started by John and Margaret Duggan in 1989 it is continued by son, Rob Duggan and daughter, Emily Ennio. Employing 30 staff and operating out of Truganina in Melbourne's Western Suburbs they specialize in plumbing and drainage for the new home industry, servicing some of Melbourne's largest volume builders.

Duggan Plumbing is always on the lookout for new and innovative products to ensure they are using the latest and best technology the plumbing industry has to offer (they insist on quality water-marked products). They regularly tests new products to see if they will offer improvements in their plumbing practices, including saving time, reducing costs and improving performance.

Duggan Plumbing has been using Mainrain Loose Nut Mini Stops for 4 years, so the release of the full Loose Nut range was highly anticipated.

Rob Duggan commented "We changed from using standard style mini stops after we were getting reports of leaks from the spindles and the female inlet which would sometimes crack when installed. Leaking Mini Stops were causing water damage inside cabinets costing us time, money and delays on site".

"We are a company that pride ourselves on quality workmanship, but we also need to use products that meet pricing pressures in the New Home Market. We balance our plumbing work with fully qualified plumbers and apprentices on each job, so using the Mainrain full range of loose nuts we

not only save time but money with no call backs for leaks. In a single story home we would use 15 to 20 Loose Nuts products per job, and on approx. 20-30 on a Double Storey home. We estimate that it saves around one hour per job"

Andreas Panayiotou is a Qualified Plumber employed by Duggan Plumbing and commented "The previous plumbing company I worked at didn't use Loose Nut Mini Stops, and since coming on board at Duggan Plumbing I can say that they absolutely save time, they make the job easier, it looks neater with no Teflon showing."

"The Mainrain Loose Nut product gives us confidence that there will be no water leaks. I can leave the Apprentice to fit off all the basins and kitchen knowing that the chance for leaks is minimal. The check valves in the 1/4

turn range means I can fit them into appliances like chillers and fridges with water and ice makers. Within cupboards you need smaller taps and in different positions, so easy positioning and the size of this product is beneficial in the confined space"

The Loose Nut range is quicker to install than a traditional stop as the rotatable nut ensures that the stop is installed to the right position on the first attempt and is ideal for smaller confined spaces.

Check out the full range of Loose Nut stops at [www.hydroflowaus.com.au](http://www.hydroflowaus.com.au) or for more information contact Hydroflow on 1300 493 359. Available for purchase at all leading Plumbing supplies. ■
