product information

Product Information

MainRain is a manual changeover valve from mains water to rain water. MainRain assists with using rainwater to flush your toilet, fill your washing machine and hose your garden. MainRain lifts the standard of manual change over valves with one single action. In the event you run out of rainwater, simply switch the distinctive MainRain green handle to mains water.

MainRain valve is completely universal. Mains water can be coming from the left or right hand side by simply changing the position of the MainRain distinctive green handle in one single operation.

The MainRain can be either pump mounted or wall mounted. In the event of the pump breaking down, simply switch the MainRain distinctive green handle to mains water and remove the pump to service. The MainRain valve in conjunction when using a top up valve is a perfect solution to the supply of continuous water when the pump requires maintenance or replacement.
